Visualizations

In order to create the visualizations for this project, I used PopSQL and Tableau. For the first three queries, I used the simple interface of PopSQL's make a chart interface. These charts consisted of two bar graphs and one stacked bar graph, to show comparison of data across different groups. To continue, I used Tableau in order to make the visualization for my fourth query since PopSQL didn't have the advanced features that I wanted to show. For this visualization, I created a line chart that showed PlusMinus trend separated by the best three future impactful players.
